RNA Sequencing

- The transcriptome is spatially and temporally dynamic
- Data comes from functional units (coding regions)
- Only a tiny fraction of the genome

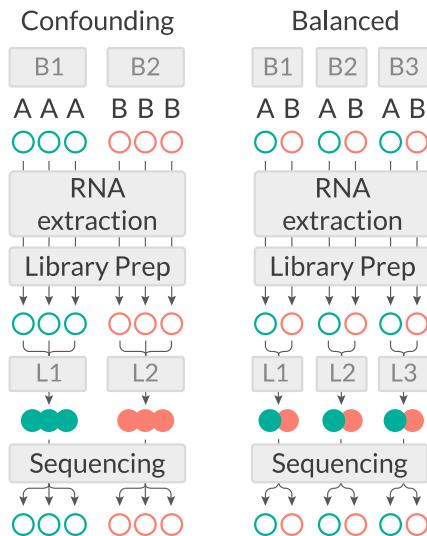

- Identify gene sequences in genomes
- Learn about gene function
- Differential gene expression
- Explore isoform and allelic expression
- Understand co-expression, pathways and networks
- Gene fusion
- RNA editing

Experimental design

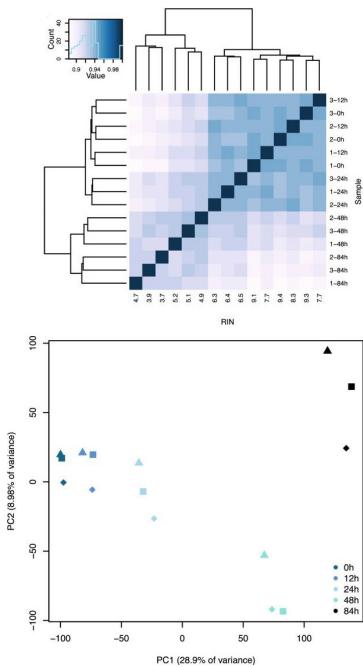

- Balanced design
- Technical replicates not necessary
(Marioni *et al.*, 2008)
- Biological replicates: 6 - 12 (Schurch *et al.*, 2016)
- ENCODE consortium
- Previous publications
- Power analysis

 [RnaSeqSampleSize](#) (Power analysis),
 [Scotty](#) (Power analysis with cost)

- 🔗 Busby, Michele A., *et al.* "Scotty: a web tool for designing RNA-Seq experiments to measure differential gene expression." *Bioinformatics* 29.5 (2013): 656-657

- PolyA selection
- rRNA depletion
- Size selection
- PCR amplification (See section PCR duplicates)
- Stranded (directional) libraries
 - Accurately identify sense/antisense transcript
 - Resolve overlapping genes
- Exome capture
- Library normalisation
- Batch effect

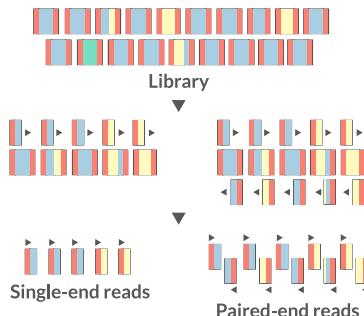

Zhao, Shanrong, et al. "Comparison of stranded and non-stranded RNA-seq transcriptome profiling and investigation of gene overlap." *BMC genomics* 16.1 (2015): 675

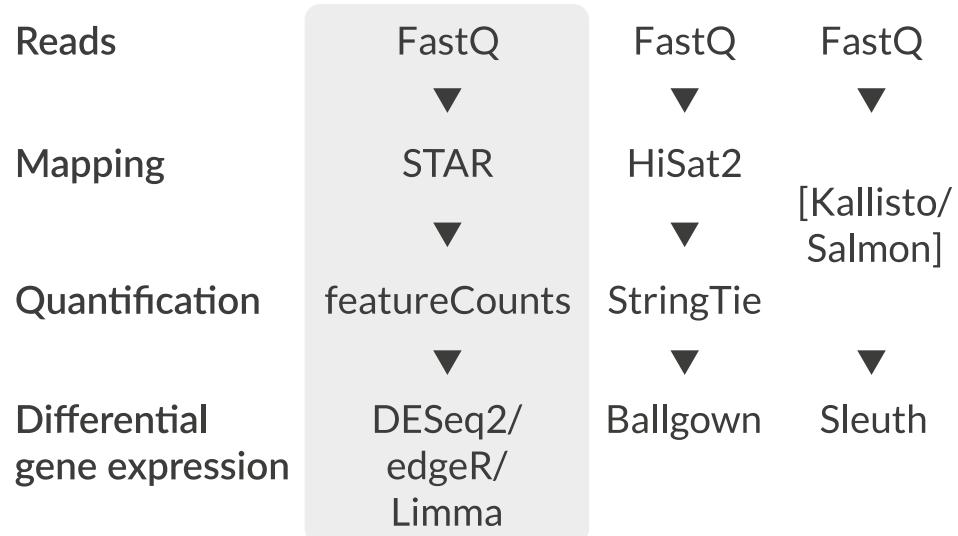

Levin, Joshua Z., et al. "Comprehensive comparative analysis of strand-specific RNA sequencing methods." *Nature methods* 7.9 (2010): 709

Sequencing

- Sequencer (Illumina/PacBio)
- Read length
 - Greater than 50bp does not improve DGE
 - Longer reads better for isoforms
- Pooling samples
- Sequencing depth (Coverage/Reads per sample)
- Single-end reads (Cheaper)
- Paired-end reads
 - Increased mappable reads
 - Increased power in assemblies
 - Better for structural variation and isoforms
 - Decreased false-positives for DGE

- 🔗 Chhangawala, Sagar, et al. "The impact of read length on quantification of differentially expressed genes and splice junction detection." *Genome biology* 16.1 (2015): 131
- 🔗 Corley, Susan M., et al. "Differentially expressed genes from RNA-Seq and functional enrichment results are affected by the choice of single-end versus paired-end reads and stranded versus non-stranded protocols." *BMC genomics* 18.1 (2017): 399
- 🔗 Liu, Yuwen, Jie Zhou, and Kevin P. White. "RNA-seq differential expression studies: more sequence or more replication?" *Bioinformatics* 30.3 (2013): 301-304
- 🔗 Comparison of PE and SE for RNA-Seq, [SciLifeLab](#)

- When no reference genome available
- To identify novel genes/transcripts/isoforms
- Identify fusion genes
- Assemble transcriptome from short reads
- Assess quality of assembly and refine
- Map reads back to assembled transcriptome

Trimming

- Trim IF necessary
 - Synthetic bases can be an issue for SNP calling
 - Insert size distribution may be more important for assemblers
- Trim/Clip/Filter reads
- Remove adapter sequences
- Trim reads by quality
- Sliding window trimming
- Filter by min/max read length
 - Remove reads less than ~18nt
- Demultiplexing/Splitting

 Cutadapt, fastp, Skewer, Prinseq

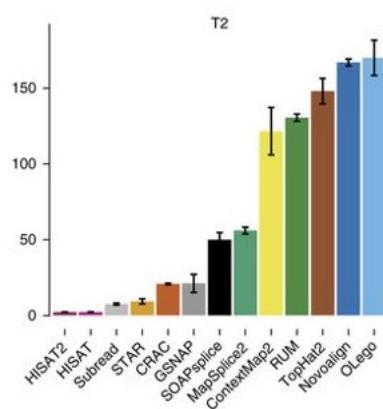

Mapping

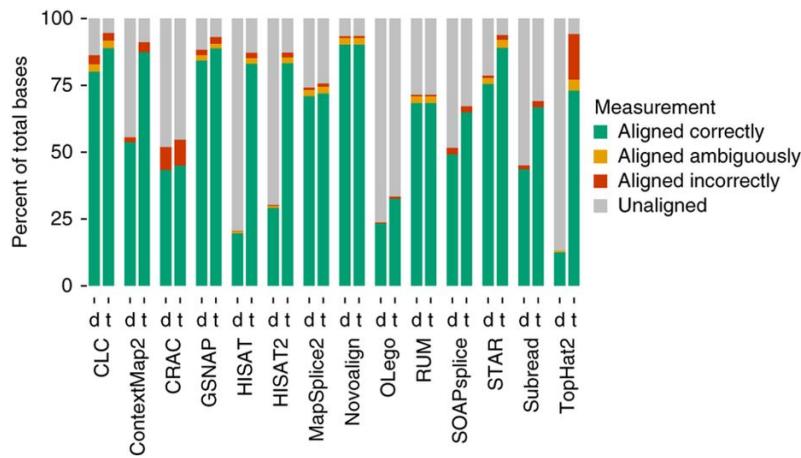

- Aligning reads back to a reference sequence
- Mapping to genome vs transcriptome
- Splice-aware alignment (genome)

 SeqMonk

- Number of reads mapped/unmapped/paired etc
- Uniquely mapped
- Insert size distribution
- Coverage
- Gene body coverage
- Biotype counts / Chromosome counts
- Counts by region: gene/intron/non-genic
- Sequencing saturation
- Strand specificity

 STAR (final log file), samtools > stats, bamtools > stats, [QoRTs](#), [RSeQC](#), [Qualimap](#)

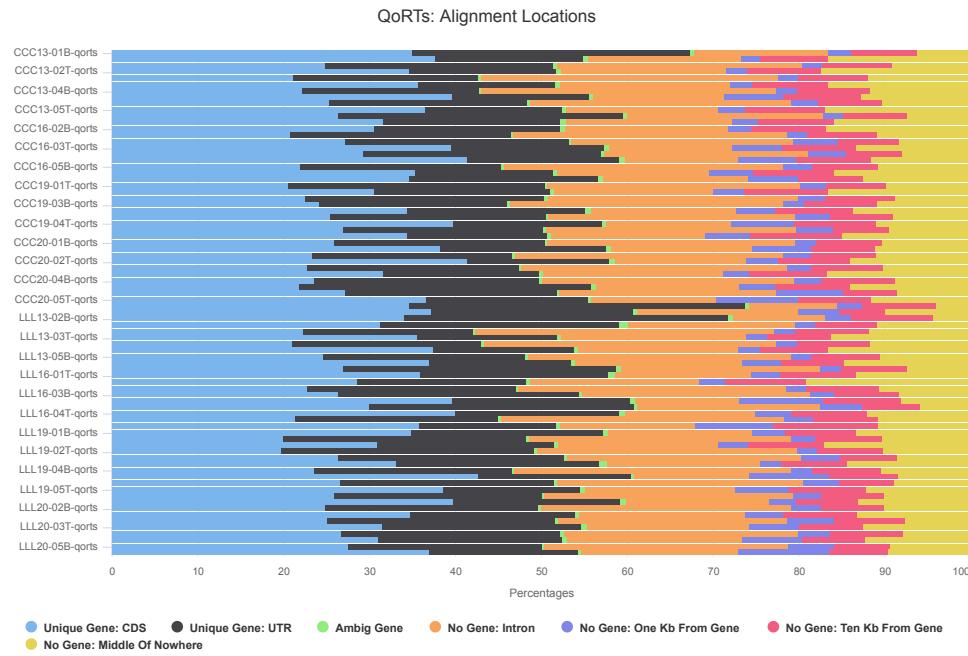

Alignment QC | STAR Log

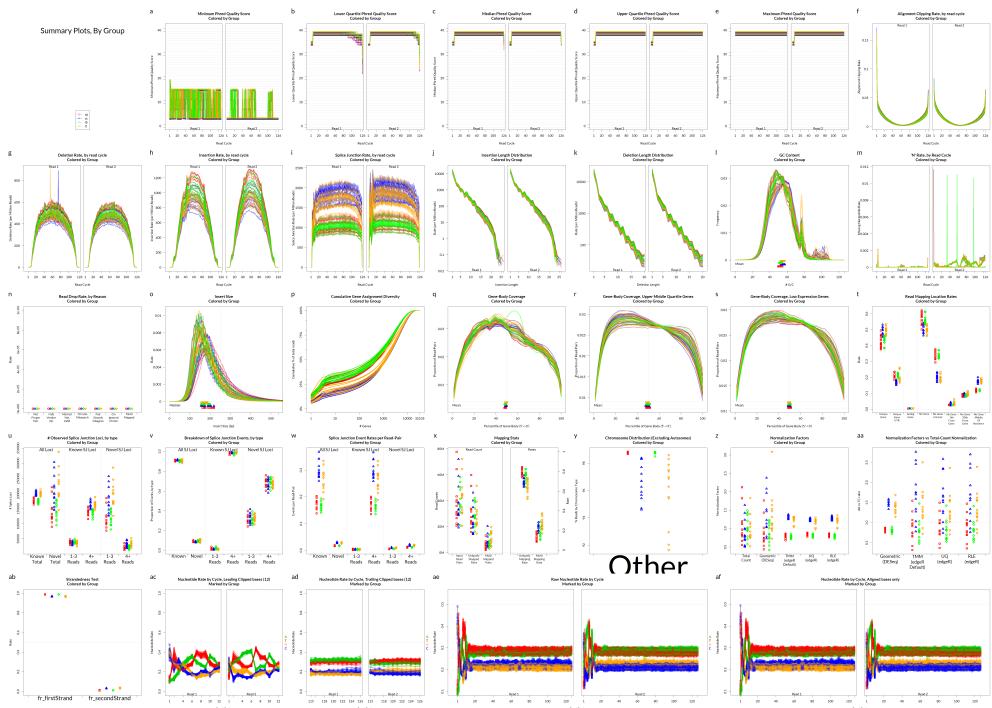

MultiQC can be used to summarise and plot STAR log files.

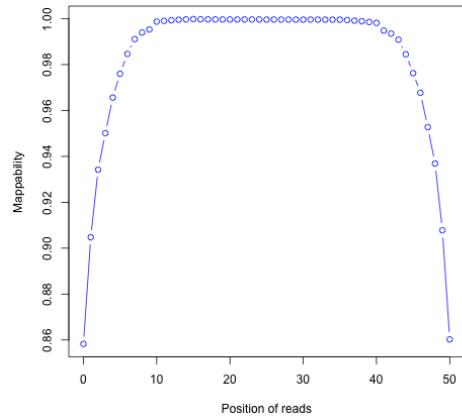

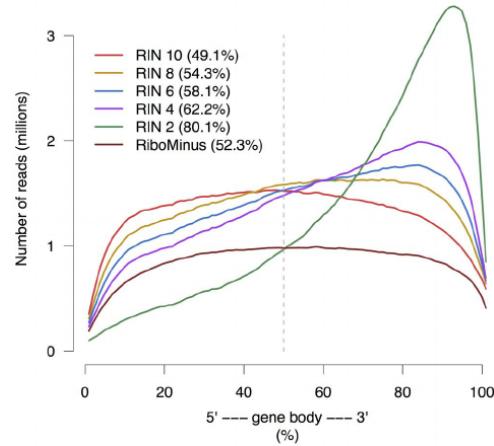

Alignment QC | Features

QoRTs was run on all samples and summarised using MultiQC.

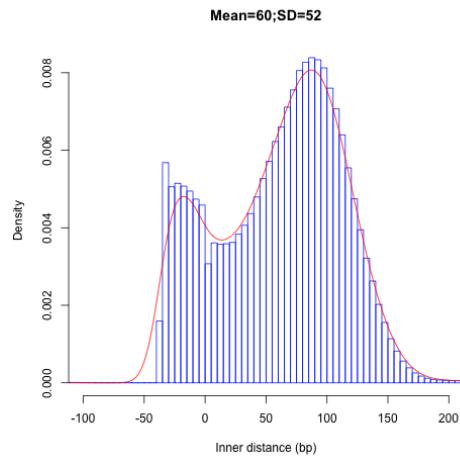

Soft clipping**Gene body coverage**

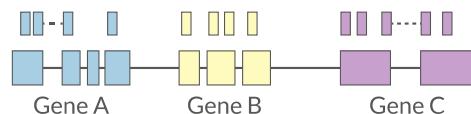

Insert size

Saturation curve

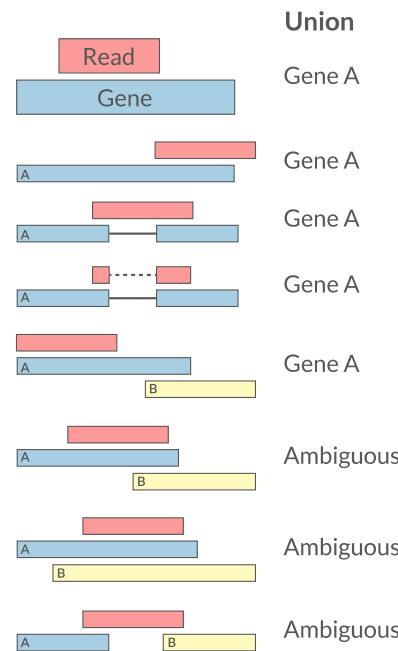

Quantification | Counts

- Read counts = gene expression
- Reads can be quantified on any feature (gene, transcript, exon etc)
- Intersection on gene models
- Gene/Transcript level

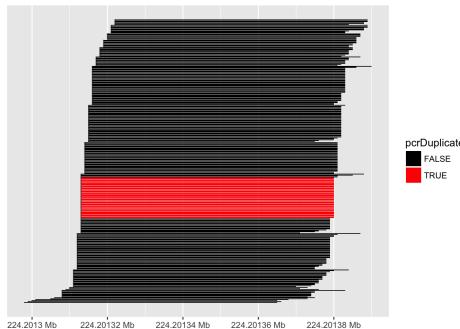

featureCounts, HTSeq

PCR duplicates

- Ignore for RNA-Seq data
- Computational deduplication (Don't!)
- Use PCR-free library-prep kits
- Use UMIs during library-prep

Multi-mapping

- Added (BEDTools multicov)
- Discard (featureCounts, HTSeq)
- Distribute counts (Cufflinks)
- Rescue
 - Probabilistic assignment (Rcount, Cufflinks)
 - Prioritise features (Rcount)
 - Probabilistic assignment with EM (RSEM)

✉ Fu, Yu, et al. "Elimination of PCR duplicates in RNA-seq and small RNA-seq using unique molecular identifiers." *BMC genomics* 19.1 (2018): 531

✉ Parekh, Swati, et al. "The impact of amplification on differential expression analyses by RNA-seq." *Scientific reports* 6 (2016): 25533

✉ Klepikova, Anna V., et al. "Effect of method of deduplication on estimation of differential gene expression using RNA-seq." *PeerJ* 5 (2017): e3091

- Count methods
 - Provide no inference on isoforms
 - Cannot accurately measure fold change
- Probabilistic assignment
 - Deconvolute ambiguous mappings
 - Transcript-level
 - cDNA reference

Kallisto, Salmon

- Ultra-fast & alignment-free
- Subsampling & quantification confidence
- Transcript-level estimates improves gene-level estimates
- Kallisto/Salmon > transcript-counts > `tximport()` > gene-counts

 [RSEM, Kallisto, Salmon, Cufflinks2](#)

- Control for Sequencing depth & compositional bias
- Median of Ratios (DESeq2) and TMM (edgeR) perform the best

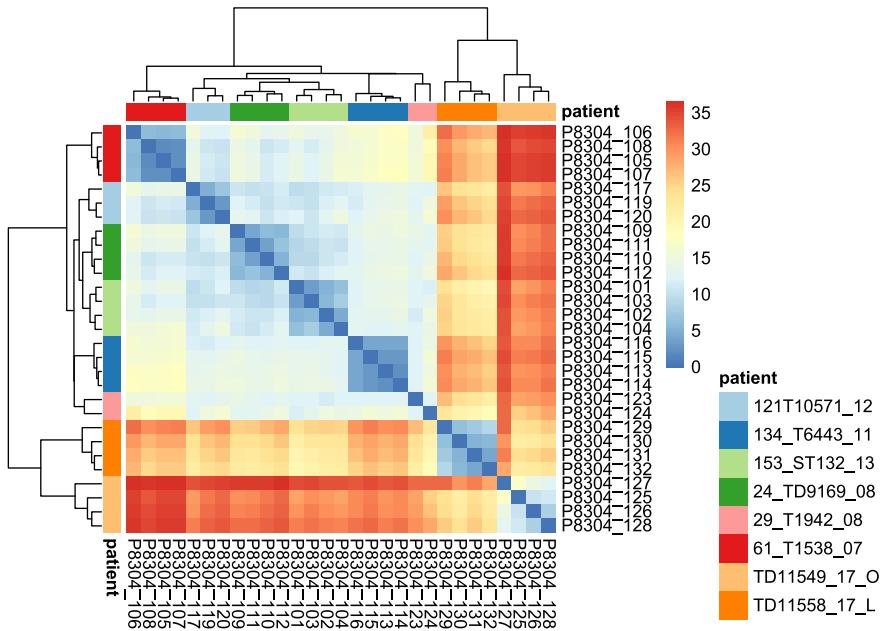

- For DGE using DGE packages, use raw counts
- For clustering, heatmaps etc use VST, VOOM or RLOG
- For own analysis, plots etc, use TPM
- Other solutions: spike-ins/house-keeping genes

- 🔗 Dillies, Marie-Agnes, et al. "A comprehensive evaluation of normalization methods for Illumina high-throughput RNA sequencing data analysis." *Briefings in bioinformatics* 14.6 (2013): 671-683

Functional analysis | GO

- Gene enrichment analysis
- Gene set enrichment analysis (GSEA)
- Gene ontology / Reactome databases

- Pathway analysis (Kegg)

 DAVID, clusterProfiler, ClueGO, ErmineJ, pathview

- Sound experimental design to avoid confounding
- Plan carefully about lib prep, sequencing etc based on experimental objective
- Biological replicates may be more important than paired-end reads or long reads
- Discard low quality bases, reads, genes and samples
- Verify that tools and methods align with data assumptions
- Experiment with multiple pipelines and tools
- QC! QC everything at every step

⌚ Conesa, Ana, *et al.* "A survey of best practices for RNA-seq data analysis." *Genome biology* 17.1 (2016): 13
